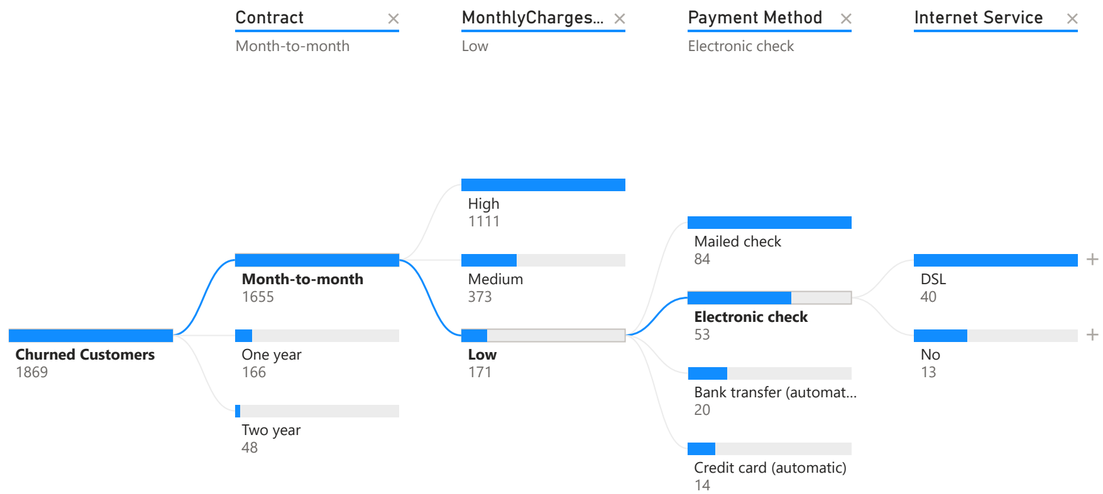
Summarized Churn Breakdown by Contract, Monthly Charges, Payment Method & Internet Service



GLO WORLD CUSTOMER RETENTION REPORT

Summary, Insights & Recommendations

Insights

- **High Churn Among Short-Term Contracts**
  Customers with month-month contracts show the highest churn rate (51%) and relatively lower lifetime Value, making them a key at-risk profile

- **Fiber Optic Users Users are more likely to churn**
  Users with Fiber Optics internet service churn at a higher rate than those using DSL, possibly due to higher costs or dissatisfaction.

- Based on CLTV, some high value customers still show high churn risk, especially in the mid-tenure months groups with short contracts. These needs attention

Recommendation

- **Promote Long-Term Contracts**
  Encourage customers to switch from month-to-month to annual contracts through discounts or loyalty perks. This has potential to reduce churn significantly.

- **Monitor Fiber Optic Customer Experience**
  Investigate why Fiber Optic users churn more. Consider customer feedback loops, pricing review, or bundling value-added services.

- **Improve Onboarding for New Customers**
  Since churn is high in the first 12 months, implement targeted onboarding emails, check-ins, or incentives in the first 3–6 months.
